

## **CREDENTIAL ROAMING**

### **ABSTRACT**

Implementations are described and claimed herein to enable credential  
5 roaming among a plurality of different computing devices. An exemplary system  
may include an event handler to receive event notifications such as, e.g., a client  
logon. The event handler may invoke a management service in response to  
receiving an event notification. The management service may include a  
synchronizing module to synchronize a user's credentials with a remote directory  
10 service, such as, e.g., Active Directory, so that the user's credentials are available  
from any of a number of different computing devices.
